

Northeast Management Region

Regional Strategy: (overall goal)

Developing parcel base maps and edge matching with adjacent counties are the primary goals of the Northeast Management Region. Once telecommunications infrastructure is in place then we will develop better access.

To accomplish the regional strategy each county is working at creating their parcel maps. These projects are at different stages for each county. Gathering the best data possible is of interest to all. So, survey points and aerial photos, like the Spring 2003 ORMAP Regional request for digital ortho photo quads, will assist in the region's conversion and accuracy issues.

As a region, we deal with many natural resource issues and emergency management services with our adjacent counties. Being able to share data in the near future will be very helpful.

Digital conversion	2005
Regional access	2006
Gathering better control	Yearly
Edge match adjacent counties	2008
